Veeva Network

Veeva Network 22R3.1.1 Data Governance

February 2023

Contents

Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be managed by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called Adding Veeva OpenData fields in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local data or third party data. A field can be managed by Veeva in some countries, managed by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model** and choosing the **Customer Master** data domain. Click **Export Data Model** or select an object to view specific field details.

 For more information about enabling Veeva OpenData fields for local or third party data use, see the topic called Enabling data model fields in the *Veeva Network Online Help*.

Data governance updates

No changes have been made to the reference data since the 22R3.1 Sandbox version of this document was published.

Country support

Veeva OpenData data models have been added for the following countries:

- Algeria (DZ)
- Cameroon (CM)
- Cote d'Ivoire (CI)
- Cyprus (CY)
- Ghana (GH)
- Israel (IL)
- Kenya (KE)
- Malta (MT)
- Mauritius (MU)
- Morocco (MA)
- Senegal (SN)
- South Africa (ZA)
- Tunisia (TN)

These countries will be managed in the EU OpenData instance.

The data models are based on the Other Countries (ZZ) data model. The data model also includes additional fields so they are consistent with other data models supported by the EU OpenData team.

The activated reference codes are based on the reference codes that are activated for Other Countries (ZZ), along with additional reference codes supported by the EU OpenData team.

Localization

Each country uses the following languages for the Network UI, data model, and reference codes.

Country	Network UI and Data Model	Reference Codes
Algeria (DZ)	French (fr)	French (fr)
Cameroon (CM)	English (en), French (fr)	English (en), French (fr)
Cote d'Ivoire (CI)	French (fr)	French (fr)
Cyprus (CY)	English (en)	Greek (el), Turkish (tr)
Ghana (GH)	English (en)	English (en)
Israel (IL)	English (en)	Hebrew (he)
Kenya (KE)	English (en)	English (en)
Malta (MT)	English (en)	English (en)
Mauritius (MU)	English (en)	English (en)
Morocco (MA)	French (fr)	French (fr)
Senegal (SN)	French (fr)	French (fr)
South Africa (ZA)	English (en)	English (en)
Tunisia (TN)	French (fr)	French (fr)

Data privacy opt out

Veeva OpenData now manages HCP opt outs in the following countries:

- Algeria (DZ)
- Cameroon (CM)
- Cote d'Ivoire (CI)
- Cyprus (CY)
- Ghana (GH)
- Israel (IL)
- Kenya (KE)
- Malta (MT)
- Mauritius (MU)
- Morocco (MA)
- Senegal (SN)
- South Africa (ZA)
- Tunisia (TN)

Two data model fields have been enabled for these countries for the HCP object:

- `data_privacy_opt_out__v`
- `data_privacy_opt_out_date__v`

Records that are opted-out by Veeva OpenData do not display and cannot be accessed in downstream systems. This ensures data privacy for opted-out HCPs to satisfy regional regulatory requirements.

Formatted name

A custom calculation has been added for the `formatted_name__v` field for Vietnam. The formatted name uses values from several name fields to display a complete name for an HCP.

This enhancement is enabled by default in your Network instance.

Name calculation

HCP names for Vietnam are calculated using these Veeva fields in the following order:

```
<last_name__v> <first_name__v>
```

Note: There is a space between the Last Name and First Name fields.

Field updates for EMEA

These fields will be automatically added to standard profile layouts, but they must be added to any custom profile layouts that you have created for these countries or regions.

Status reason fields

The following fields have been added to Baltic and Middle Eastern countries:

- `hcp_status_reason__v` (HCP)
- `parent_hco_status_reason__v` (ParentHCO)

These are existing fields, so they will not be managed by Veeva OpenData by default.

The fields are added to the following 14 countries:

- Estonia (EE)
- Iceland (IS)
- Lithuania (LT)
- Latvia (LV)
- Romania (RO)
- Bahrain (BH)
- Kuwait (KW)

- Lebanon (LB)
- Oman (OM)
- Qatar (QA)
- Saudi Arabia (SA)
- United Arab Emirates (AE)
- Egypt (EG)
- Jordan (JO)

Fields for Greece

The following fields are now enabled for Greece:

HCO fields

- count_all_locn_md_do__v
- count_all_locn_medstaff__v
- count_beds__v
- count_employees__v
- count_inpatients__v
- count_md_do__v
- count_medstaff__v
- count_operating_rooms__v
- count_outpatients__v
- count_patients__v
- hco_tax_id__v

HCP fields

- hcp_tax_id__v
- nickname__v

These are existing fields, so they will not be managed by Veeva OpenData by default.

Global data updates

The following sections describe reference data considerations and updates for applicable regions.

ALBANIA

The following changes have been applied:

Object	Field	Reference Type	Code	Description (EN)	Translation
HCP, ParentHCO	primary_relation_type__v, relationship_type__v	RelationType	DNH	Department Nurse Head	Departamenti i Kryeinfermiereve
			MIDWIFE	Midwife	Mami

BOSNIA AND HERZEGOVINA

The following changes have been applied:

Object	Field	Reference Type	Code	Description (EN)	Translation
HCP, ParentHCO	primary_relation_type__v, relationship_type__v	RelationType	DNH	Department Nurse Head	Glavna Medicinska sestra
			MIDWIFE	Midwife	Babica

CHINA

Global data inactivations

The following sections list reference codes that have been inactivated by Veeva OpenData for the countries listed in this release. Veeva OpenData does not use these codes in their data; you may choose to update reference code mappings accordingly unless they are required by your own data.

To view reference codes that have been inactivated by OpenData for all releases, see Inactivated reference codes in the *Veeva Network Online Help*.
