Data governance

The data governance document describes data changes introduced in this release as of the publication date of this document.

Adding new fields to your Veeva OpenData subscription

When Veeva OpenData adds new fields to a country that you are subscribed to, you can add the field to the subscription so that it's ready to receive data and be managed by Veeva OpenData.

For information about adding new Veeva OpenData fields to your subscription, see the topic called [Adding Veeva OpenData](#) fields in the *Veeva Network Online Help*.

Enabling Veeva OpenData fields for extended use

Veeva OpenData fields can be enabled to load local data or third party data. A field can be managed by Veeva in some countries, managed by a third party source in other countries, or be owned by a customer in the remaining countries.

Administrators can view ownership of the data model fields, by country, in the Network user interface by navigating to **Data Model** and choosing the **Customer Master** data domain. Click **Export Data Model** or select an object to view specific field details.

For more information about enabling Veeva OpenData fields for local or third party data use, see the topic called [Enabling data model](#) fields in the *Veeva Network Online Help*.

Country support

Veeva OpenData data models have been added for the following countries:

- Egypt (EG)
- Jordan (JO)

These data models are based on the Other Countries (ZZ) data model. The data models also include additional fields so they are consistent with other European OpenData data models.

The activated reference codes are based on the reference codes that are activated for Other Countries (ZZ), along with additional reference codes supported by the European OpenData team.

Localization

English (en) translations will be used for the Network UI, data model fields, and reference data for both countries.

Data privacy opt out

Veeva OpenData now manages HCP opt outs for the following countries:

- Egypt (EG)
- Jordan (JO)

Two data model fields will be enabled for the HCP object for these countries:

- `data_privacy_opt_out__v`
- `data_privacy_opt_out_date__v`

Records that are opted-out by Veeva OpenData do not display in the Network UI and cannot be accessed in downstream systems. This ensures data privacy for opted-out HCPs to satisfy regional regulatory requirements.

To review the list of opted-out countries in the `data_privacy_opt_out__v` field:

1. In the Admin console, click **Data Model > Data Domains > Customer Master** and select the **Health Care Professional** object.
2. Click the `data_privacy_opt_out__v` field to open it and see opted-out countries.

Formatted name

The rule for formatting HCP name has been updated for South Korea (KR). The space is removed between the two name fields.

- Updated rule: `<Last_Name><First_Name>`

This update is enabled by default in your Network instance.

Field updates for all countries and regions

Definitions have been updated for the following fields:

- `link_vid__v` – Network Veeva ID that is used to link records for the same HCP in different countries. One link ID is used to link two or more different Veeva IDs. This field is used by the Multi-Country HCP feature.

Previously, the definition was “Link ID”.

- `veeva_link_url__v` – URL of this HCP’s profile in the Veeva Link product.

Previously, the definition was “URL to the Veeva Link product”.

These updates are enabled by default in your Network instance.

Field updates for China

The field will be automatically added to standard profile layouts, but it must be added to any custom profile layouts that you have created for these countries or regions.

Hospital Grade field

The `hospital_grade__v` field has been added to the HCO object for the following countries or regions:

- Hong Kong (HK)
- Macao (MO)
- Taiwan (TW)

This is an existing field, so it will not be managed by Veeva OpenData by default.

Field updates for Europe

The field will be automatically added to standard profile layouts, but it must be added to any custom profile layouts that you have created for these countries or regions.

Latvia

The following field has been added to the HCP object for Latvia:

- `lfb_id__v` – Registration ID for pharmacists. Issuing Body Pharmacists Latvijas Farmaceitu Biedrības.

This is a new field so it will be managed by Veeva OpenData by default.

Field updates for Latin America

The field will be automatically added to standard profile layouts, but it must be added to any custom profile layouts that you have created for these countries or regions.

Number of Beds field

The `count_beds__v` field has been added to the HCO object for the following countries:

- Argentina (AR)
- Bahamas (BS)
- Barbados (BB)
- Bermuda (BM)
- Bolivia (BO)
- Cayman Islands (KY)
- Chile (CL)
- Colombia (CO)
- Costa Rica (CR)
- Curacao (CW)
- Dominican Republic (DO)
- Ecuador (EC)
- El Salvador (SV)
- Guatemala (GT)
- Honduras (HN)
- Jamaica (JM)
- Mexico (MX)
- Nicaragua (NI)
- Panama (PA)
- Paraguay (PY)
- Peru (PE)
- Trinidad and Tobago (TT)
- Uruguay (UY)

This is an existing field, so it will not be managed by Veeva OpenData by default.

Global data updates

The following sections describe reference data considerations and updates for applicable regions.

ALL COUNTRIES

The following changes have been applied:

Object	Field	Reference Type	Code	Description (EN)	Translation
Address	administrative_area__v	AddressAdminArea	ID-KU	Kalimantan Utara	Kalimantan Utara
			ID-PP	Papua	Papua
			MO-CI	Coloane	路环
